**Re: Proposition 65 Statement for Caustic Soda Solution**

Dear Valued Customer:

Caustic Soda is not listed as a carcinogen or reproductive hazard under California’s Proposition 65 Safe Drinking Water and Toxic Enforcement Act. However, materials used the manufacturing process may result in contamination with trace quantities of various metals listed under Proposition 65.

In order to characterize the residual metal contamination, Formosa Plastics Corporation, U.S.A. performs regular analysis of our Caustic Soda products. The following Proposition 65 regulated metals have been found in previous analytical results:

Substance:	Amount Detected:	Date Last Detected:
Beryllium	0.96 ppm	12/03/13
Chromium	0.35 ppm	12/03/13
Nickel	0.23 ppm	07/01/13

Please note that the identity and concentrations of metals can vary. However, no metal contaminant has been found in concentrations exceeding the 0.1% threshold for carcinogens under the U.S. Federal and California State occupational hazard communication regulations.

In addition, section 25707(b) of Proposition 65 indicates that Beryllium, Chromium and Nickel compounds do not pose a significant risk of cancer when ingested.

We hope you find this information useful. If you have questions, please contact me at (973) 716-7279 or [fneske@fpcusa.com](mailto:fneske@fpcusa.com).
