Re: Proposition 65 Statement for Caustic Soda Solution

Dear Valued Customer:

Caustic Soda is not listed as a carcinogen or reproductive hazard under California’s Proposition 65 Safe Drinking Water and Toxic Enforcement Act. However, materials used in the manufacturing process may result in contamination with trace quantities of various metals listed under Proposition 65.

In order to characterize the residual metal contamination, Formosa Plastics Corporation, U.S.A. performs regular analysis of our caustic soda products. The following Proposition 65 regulated metal has been found in previous analytical results:

<table>
<thead>
<tr>
<th>Substance</th>
<th>Amount Detected</th>
<th>Date Last Detected</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chromium</td>
<td>0.1 ppm</td>
<td>03/08/19</td>
</tr>
</tbody>
</table>

Please note that the identity and concentrations of metals can vary. However, no metal contaminant has been found in concentrations exceeding the 0.1% threshold for carcinogens under the U.S. Federal and California State occupational hazard communication regulations.

As always, You expect more. And Formosa delivers®. If you have questions, please contact your Sales or Customer Service Representative.

Sincerely,

/s/
Claire Guo
