**Re: Product General Declarations - Formolon® Suspension Polyvinyl Chloride (PVC)
Homopolymer**

Dear Valued Customer:

Formolon® suspension PVC homopolymer resins are manufactured in Formosa Plastics' facilities in Texas and Louisiana. Greater than 99 percent of all materials used in the manufacture of these resins are sourced from domestic suppliers.

Please be advised that, to the best of our knowledge, the ingredients used, manufactured, and processed for Formolon® suspension PVC homopolymer resins do not intentionally contain any of the materials listed below. Based upon our knowledge of the manufacturing process and information provided by our raw material suppliers, we would not expect these substances to be present in our final product. Analysis for these chemicals is not routinely performed. Please note that, as the supplier of the resins, Formosa cannot make any claim with regard to extruded or molded products or components made from them.

Food Allergens

Formolon® suspension PVC homopolymer resins do not contain allergenic ingredients such as tree nuts, peanut products, soybean products, egg products, milk products, fish, shellfish (e.g. crustaceans and products), wheat products (e.g. gluten), sunflower seeds, poppy seeds, sesame seeds, celery and products, mustard and products or sulfites.

Genetically Modified Organisms

Genetically modified organisms are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins, except an ingredient used to manufacture Formolon® 622S produced in our Texas facility contains substances derived from genetically modified plant species.

Latex

To the best of our knowledge, the materials used, manufactured, and processed for Formolon® suspension PVC homopolymer resins do not contain natural latex rubber or dry natural rubber.

Ozone Depleting Substances

Materials listed in the Clean Air Act Amendments of 1990 (Class I CFC's, Class II HCFC's and the solvents, carbon tetrachloride and 1,1,1-trichloroethane) are not used in the manufacture of Formolon® suspension PVC homopolymer resins.

Heavy Metals

These resins comply with the package requirements for heavy metals as set forth by the Coalition of Northeast Governors (CONEG), the California Toxics in Packaging Act and Article 11 of EU Directive 94/62/EC. Lead, cadmium, mercury, and hexavalent chromium are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins. Therefore, the sum of the incidental (non-intentionally added) concentrations of these heavy metals in Formolon®

suspension PVC homopolymer resins does not exceed the CONEG threshold of 100 parts per million by weight.

EU Restriction of Hazardous Substances (RoHS, RoHS 2, RoHS 3, RoSH10) Directives 2002/95/EC, 2011/65/EU and amendment (EU) 2015/863

These resins meet the safety and regulatory requirements for certification under this standard. Formosa Plastics Corporation, U.S.A. does not intentionally add lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBB), polybrominated diphenyl ethers (PBDE) or any of the four designated phthalates (DEHP, BBP, DBP and DIBP) during the manufacture of Formolon® suspension PVC homopolymer resins.

Pentabromodiphenyl Ether & Octabromodiphenyl Ether

Pentabromodiphenyl Ether and Octabromodiphenyl Ether are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins.

Phthalates, Bisphenol A (BPA) and Bisphenol S (BPS)

Phthalates (BBP, DBP, DEHP, DEP, DnHP, DIBP, DIDP, DINP, DNOP), Bisphenol A and Bisphenol S are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins.

Glycidyl Ethers (BADGE, BFDGE, NOGE) – Epoxy Derivatives

Bisphenol A Diglycidyl Ether (BADGE), Bisphenol F Diglycidyl Ether (BFDGE) and Novolac Glycidyl Ether (NOGE) are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins. To the best of our knowledge, these resins are in compliance with EC Regulation 1895/2005 for epoxy derivatives.

PFOA, PFAS, PFOS, PFHxS and DMF

Perfluorooctanoic Acid (PFOA), Per- and Polyfluoroalkyl Substances (PFAS), Perfluorooctanesulfonic Acid (PFOS), Perfluorohexanesulfonic Acid (PFHxS) and Dimethyl Fumarate (DMF) are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins.

Post-Consumer Recycled Materials

Post-consumer recycled materials are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins.

California Proposition 65

Formolon® suspension PVC homopolymer resins contain minor amounts of residual vinyl chloride monomer (RVCM) which is listed by the State of California under Proposition 65. Vinyl chloride is listed as a carcinogen with a No Significant Risk Level (NSRL) of 3µg/day. Additional information on RVCM is available on the certificate of analysis provided with each shipment. Please refer to the Safety Data Sheet (SDS) for additional information.

Organotin Compounds

Organotin compounds are not used in the formulation or manufacture of Formolon® suspension PVC homopolymer resins.

Animal Derived Materials (incl. BSE/TSE)

No animal derived materials are used in the manufacture of Formolon® suspension PVC homopolymer resins, except an ingredient used to manufacturer Formolon® 622S produced in our

Texas facility contains substances derived from animal derived materials. Any resin grades that are listed as meeting European Union and U.S. Food & Drug Administration standards for food contact use are also free from contamination with Bovine Spongiform Encephalopathy (BSE) and Transmissible Spongiform Encephalopathy (TSE) agents. Also, to the best of our knowledge, all materials used to clean this equipment and all test materials used in the validation of plant and equipment are similarly compliant.

If you have questions, please contact your Sales or Customer Service Representative.

Sincerely,

/s/

Grace Chang
